

A scientist's journey at the intersection of nutrition, immunity, and metabolism

Suneil Koliwad, MD, PhD

*Associate Professor of Medicine and Chief, Division of Endocrinology & Metabolism
Kenneth Woeber, MD/Mt. Zion Health Fund
Distinguished Professor of Endocrinology
Gerold Grodsky, PhD/JAB Professorship in
Diabetes Research
University of California, San Francisco*

**UWMDI DIRECTOR
CANDIDATE**

**Tuesday,
January 24, 2023
4:00-5:00pm**

UW Medicine
DIABETES INSTITUTE

Dr. Koliwad is an endocrinologist who specializes in diabetes, obesity and other metabolic disorders and conditions linked to metabolism. He serves as chief of UCSF's endocrinology and metabolism division.

Dr. Koliwad directs a research lab focused on the intersection of nutrition, inflammation and metabolic tissue function in healthy patients as compared with those with conditions such as obesity, diabetes and fatty liver disease. Also examining how these factors change during aging, his lab studies a diverse group of UCSF obesity patients with the goal of finding links between metabolic regulation and development of these diseases.

Dr. Koliwad holds the Gerold Grodsky, PhD Chair in Diabetes Research.
